

»HOME FLAME COLLECTION«

Be it with friends or enjoying calm comfort in front of the fire at home – the new combustion chamber from RADIUS DESIGN makes it possible everywhere and affordable by everyone. Moreover, traditional hearth quality is delivered using bio-fuels.

For centuries, an open fireplace has been considered the heart of the home, before it became a luxury symbol of today. In recent years, using methylated spirits or pastes, any number of variants of pseudo-fireplaces cropped up in apartments. But the real lovers of open fires simply could not take to the, as the flames were reminiscent more of a burning torch than a fire, or simply smoldered away pitifully.

With his team, Michael Rösing, designer and MD of Radius Einrichtungsbedarf GmbH in Brühl, has now developed a collection of outstandingly designed open hearths for indoor use, all with high-grade finishing – and they would seem to be a match for real fireplaces, or so the response at the »Tendence Lifestyle« trade fair, which recently took place in Frankfurt, would suggest. There, the »Home Flame Collection« was presented to the trade public for the first time.

The special thing about the »Radius Design« fireplaces is the combustion chamber made of double-skin stainless steel, with a special ceramic sponge in the middle. This ensures even combustion down to the very last drop of bio-ethanol and creates a large and beautifully even set of flames. The combustion chamber in the »Pure« version has such an ingenious structure that it can be placed in any fireproof container and can thus, for example, bring a new lease of life to abandoned fireplaces. When integrated into the elegant bodies Michael Rösing has developed for wall, floor or table-top mounting, the units form an attractive focus of attention for any living interior.

The gross sales price for the items in the collection is between EUR 278 and EUR 799. They can be obtained from various dealers under contract to RADIUS DESIGN or from the latter's online shop. Technical details and specifications on the versions and sizes are provided on the second page of this document. For further information and images of the complete »Home Flame Collection« simply click <http://www.radius-design.com> Should you have any inquiries relating to the product and company or require high-res images, please contact:

»HOME FLAME COLLECTION«

Technical specifications on the combustion chamber:

- Non-wearing special ceramic burner
- Operated with liquid bio-ethanol, 96%, denatured with 1% mek. it largely turns into steam and carbon dioxide when burnt.
- Combustion is odorless, clean, and leaves no residues
- Thickening agents such as burning gel or paste are NOT required.
- Combustion period: approx. 5 hours per filling (1.7 l vessel)
- Combustible even when the vessel is only minimally filled
- Flame can be regulated as required
- Even set of flames produced, even when the vessel is only minimally filled
- Low heat output by the combustion chamber
- Optimal safety thanks to the twin-skin combustion chamber block
- Removable regulating flaps for simple cleaning

Versions/materials:

- Combustion chamber: twin-skin high-grade stainless steel 18/10,
- Body: sheet steel, powder-coated black, heat-resistant glass, stainless steel reflector, lightly brushed

Measurements:

»pure«: 29 cm wide, 22 cm deep, 6 cm high

»table flame«: 37 cm wide, 28 cm deep, 10 cm high

»floor flame«: 78 cm wide, 29 cm deep, 11 cm high + 20 cm glass panes

»wall flame I«: 80 cm wide, 35 cm deep, 40 cm high

»wall flame II«: 80 cm wide, 35 cm deep, 40 cm high

»corner flame«: 135 cm wide, 35 cm deep, 40 cm high
